

FOR IMMEDIATE RELEASE

VMS Software, Inc. Acquires All Existing OpenVMS Support Contracts from HPE

BOLTON, MA, USA, October 24, 2019 - VMS Software, Inc. (VSI) announced today that it has purchased the existing OpenVMS support business from Hewlett Packard Enterprise (HPE). With this acquisition, VSI has purchased the right to renew all OpenVMS support contracts whether the support involves older HPE OpenVMS license versions (V8.4 or earlier) or the newer VSI OpenVMS versions (V8.4-1h1 and higher).

“We are delighted for the opportunity to work with all OpenVMS support customers and assist with their computing needs,” said Terry R. Holmes, VSI VP Sales & Marketing. Holmes continued, “We are excited about the opportunity to share with customers our vision for the future of this highly available and secure operating system with new products, support and Professional Services.”

OpenVMS customers who have support contracts through VSI will experience no changes. For those OpenVMS customers who currently have support contracts through HPE, there will be an explanation of the simple transition process from both VMS Software, Inc. and HPE.

“Since May 2018, VSI has partnered with HPE providing 24x7x365 support for all OpenVMS customers. VSI’s knowledge of the HPE customer community’s needs and VSI’s world-class OpenVMS technical support team ensures a smooth transition from HPE to VSI OpenVMS software support,” remarked Dave Sweeney, VSI VP of Product Support. Sweeney added, “Whether your goal is to modernize your OpenVMS configurations or maintain status quo, the VSI support team is available 24x7 to ensure your high availability requirements.”
